PAD EYES

4 screws pad eye in AISI 316 S.Steel, Ø10, SWL 2500 kg.

The pad-eye should be positioned so that the **direction** of the **main load** is in the **plane of the arc**. For **different load directions** appropriate **reduction** of the **SWL** must be considered (see drawing). **Loads** in the **transverse plane** can cause **deformations of the arc** therefore appropriate **reductions** of the **SWL** must be considered (see drawing).

However, with side loads small deformations will always be possible.
