CLEATS

Roller cleat in silver anodized aluminum for boats up to 46'.

Roller is a **folding cleat** with rotating horns: with a simple hand movement, the horn of the cleat can be **opened or closed** simply by **rotating it**, even with the mooring line in place.

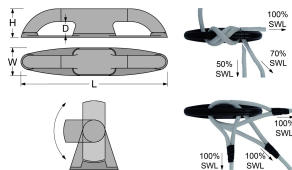

When Roller is open: the mooring line can be easily tied or released.

When Roller is closed: this position minimizes the overall dimensions and prevents other lines from becoming unintentionally caught.

The **Safe Working Load (SWL)** may vary depending on the pulling direction and on the type of mooring line used.

Mooring knot: the maximum load depends on the pulling direction (see drawing).

Spliced mooring: the working load remains constant regardless of the pulling direction (see drawing).
