RINGS AND DYNEEMA LOOPS

In **2008** Antal introduced the **low friction ring** to the market, a product that revolutionized the line-handling on sailboats. In **2020** Antal introduces **SectoRing**, the spinning ring with a guiding cover, small in size and low in weight, the perfect solution for high loads where large and fast movements are not required. SectoRing is also available without the Antal snap loop where it can be used in custom fastening applications (in that case the SWL depends on the strength of the fastening but must not exceed Antal values).
